

torch.fx.experimental.symbolic_shapes.c

https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_sh

Description:

Canonicalize a boolean expression by transforming it into a lt / le inequality and moving all the non-constant terms to the rhs. We canonicalize And / Ors / Not via cnf and then canonicalize their subexpr recursively nb. `sympy.Rel.canonical` is not good enough [sympy/sympy#25924](#) `expr (sympy.Expr) – Expression to canonicalize`

Function Signature

```
torch.fx.experimental.symbolic_shapes.canonicalize_bool_expr  
(expr)[source]#
```

Parameters

Return type

Returns:

`_T`

Detailed Documentation

Documentation

Canonicalize a boolean expression by transforming it into a lt / le inequality and moving all the non-constant terms to the rhs. We canonicalize And / Ors / Not via cnf and then canonicalize their subexpr recursively nb. sympy.Rel.canonical is not good enough
