

torch.fx.experimental.symbolic_shapes.g

[https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_shapes](https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_shapes.guard_size_oblivious.html)

Description:

Perform a guard on a symbolic boolean expression in a size oblivious way. This is typically used when a non-oblivious test would result in a guard on a data dependent value of which we don't know the value of at compile time. When a guard is tested this way, we may diverge in behavior from how regular PyTorch semantics would treat it. For more information, see [pytorch/pytorch#118579](https://github.com/pytorch/pytorch/issues/118579)

Function Signature

```
torch.fx.experimental.symbolic_shapes.guard_size_oblivious(  
    expr)[source]#
```

Return type

Returns:

bool
