

# torch.fx.experimental.symbolic\_shapes.static

[https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic\\_shapes.static](https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_shapes.static)

## Description:

Returns True if x can be simplified to a constant and is False. If x cannot be evaluated from static, we return False This function doesn't introduce new guards, so the expression may end up evaluating to False at runtime even if this function returns False. x (bool, SymBool) – The expression to try statically evaluating

## Function Signature

---

```
torch.fx.experimental.symbolic_shapes.static_known_false  
(x)[source]#
```

Parameters

Return type

## Returns:

bool

## Notes & Warnings

---

### NOTE

Note This function doesn't introduce new guards, so the expression may end up evaluating to False at runtime even if this function returns False.

## Detailed Documentation

---

### Documentation

Returns True if x can be simplified to a constant and is False. If x cannot be evaluated from static, we return False

This function doesn't introduce new guards, so the expression may end up evaluating to False at runtime even if this function returns False.

x (bool, SymBool) – The expression to try statically evaluating

Returns True if x can be simplified to a constant and is False. If x cannot be evaluated from static, we return False

This function doesn't introduce new guards, so the expression may end up evaluating to False at runtime even if this function returns False.

x (bool, SymBool) – The expression to try statically evaluating
