

torch.fx.experimental.symbolic_shapes.static_

https://pytorch.org/docs/stable/generated/torch.fx.experimental.symbolic_shapes.static_

Description:

Returns True if x can be simplified to a constant and is true. This function doesn't introduce new guards, so the expression may end up evaluating to true at runtime even if this function returns False. x (bool, SymBool) – The expression to try statically evaluating

Function Signature

```
torch.fx.experimental.symbolic_shapes.static_known_true(  
x)[source]#
```

Parameters

Return type

Returns:

bool

Notes & Warnings

NOTE

Note This function doesn't introduce new guards, so the expression may end up evaluating to true at runtime even if this function returns False.

Detailed Documentation

Documentation

Returns True if x can be simplified to a constant and is true.

This function doesn't introduce new guards, so the expression may end up evaluating to true at runtime even if this function returns False.

x (bool, SymBool) – The expression to try statically evaluating

Returns True if x can be simplified to a constant and is true.

This function doesn't introduce new guards, so the expression may end up evaluating to true at runtime even if this function returns False.

x (bool, SymBool) – The expression to try statically evaluating
