

# torch.get\_device\_module#

[https://pytorch.org/docs/stable/generated/torch.get\\_device\\_module.html](https://pytorch.org/docs/stable/generated/torch.get_device_module.html)

## Description:

Returns the module associated with a given device(e.g., `torch.device('cuda')`, `"mtia:0"`, `"xpu"`, ...). If no device is given, return the module for the current accelerator or CPU if none is present.

## Function Signature

---

```
torch.get_device_module(device=None)[source]#
```

# Detailed Documentation

---

## Documentation

Returns the module associated with a given device(e.g., `torch.device('cuda')`, `"mtia:0"`, `"xpu"`, ...). If no device is given, return the module for the current accelerator or CPU if none is present.

Returns the module associated with a given device(e.g., `torch.device('cuda')`, `"mtia:0"`, `"xpu"`, ...). If no device is given, return the module for the current accelerator or CPU if none is present.
