

torch.histc#

<https://pytorch.org/docs/stable/generated/torch.histc.html>

Description:

Computes the histogram of a tensor. The elements are sorted into equal width bins between min and max. If min and max are both zero, the minimum and maximum values of the data are used. Elements lower than min and higher than max and NaN elements are ignored. input (Tensor) – the input tensor. bins (int) – number of histogram bins

Function Signature

```
torch.histc(input, bins=100, min=0, max=0, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

Returns

Return type

Parameters

Keyword

out (Tensor, optional) – the output tensor.

Returns:

Tensor

Code Examples

```
>>> torch.histc(torch.tensor([1., 2, 1]), bins=4, min=0, max=3)
tensor([ 0.,  2.,  1.,  0.]
```

Detailed Documentation

Documentation

Computes the histogram of a tensor.

The elements are sorted into equal width bins between min and max. If min and max are both zero, the minimum and maximum values of the data are used.

Elements lower than min and higher than max and NaN elements are ignored.

input (Tensor) – the input tensor.

bins (int) – number of histogram bins

min (Scalar) – lower end of the range (inclusive)

max (Scalar) – upper end of the range (inclusive)

out (Tensor, optional) – the output tensor.

Histogram represented as a tensor
