

torch.hspmm#

<https://pytorch.org/docs/stable/generated/torch.hspmm.html>

Description:

Performs a matrix multiplication of a sparse COO matrix `mat1` and a strided matrix `mat2`. The result is a (1 + 1)-dimensional hybrid COO matrix. `mat1` (Tensor) – the first sparse matrix to be matrix multiplied `mat2` (Tensor) – the second strided matrix to be matrix multiplied out (Tensor, optional) – the output tensor.

Function Signature

```
torch.hspmm(mat1, mat2, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

Parameters

Keyword

out (Tensor, optional) – the output tensor.

Detailed Documentation

Documentation

Performs a matrix multiplication of a sparse COO matrix `mat1` and a strided matrix `mat2`. The result is a $(1 + 1)$ -dimensional hybrid COO matrix.

`mat1` (Tensor) – the first sparse matrix to be matrix multiplied

`mat2` (Tensor) – the second strided matrix to be matrix multiplied

`out` (Tensor, optional) – the output tensor.

Performs a matrix multiplication of a sparse COO matrix `mat1` and a strided matrix `mat2`. The result is a $(1 + 1)$ -dimensional hybrid COO matrix.

`mat1` (Tensor) – the first sparse matrix to be matrix multiplied

`mat1` (Tensor) – the first sparse matrix to be matrix multiplied

`mat2` (Tensor) – the second strided matrix to be matrix multiplied

`mat2` (Tensor) – the second strided matrix to be matrix multiplied

`out` (Tensor, optional) – the output tensor.
