

torch.is_complex#

https://pytorch.org/docs/stable/generated/torch.is_complex.html

Description:

Returns True if the data type of input is a complex data type i.e., one of `torch.complex64`, and `torch.complex128`. `input` (Tensor) – the input tensor.

Function Signature

```
torch.is_complex(input: Tensor) → bool#
```

Parameters

Code Examples

```
>>> torch.is_complex(torch.tensor([1, 2, 3],
dtype=torch.complex64))
True
>>> torch.is_complex(torch.tensor([1, 2, 3],
dtype=torch.complex128))
True
>>> torch.is_complex(torch.tensor([1, 2, 3], dtype=torch.int32))
False
>>> torch.is_complex(torch.tensor([1.0, 2.0, 3.0],
dtype=torch.float16))
False
```

Detailed Documentation

Documentation

Returns True if the data type of input is a complex data type i.e., one of `torch.complex64`, and `torch.complex128`.

input (Tensor) – the input tensor.

Returns True if the data type of input is a complex data type i.e., one of `torch.complex64`, and `torch.complex128`.

input (Tensor) – the input tensor.
