

torch.is_tensor#

https://pytorch.org/docs/stable/generated/torch.is_tensor.html

Description:

Returns True if obj is a PyTorch tensor. Note that this function is simply doing `isinstance(obj, Tensor)`. Using that `isinstance` check is better for type checking with mypy, and more explicit - so it's recommended to use that instead of `is_tensor`. obj (object) – Object to test

Function Signature

```
torch.is_tensor(obj, /)[source]#
```

Parameters

Return type

Returns:

Typels[Tensor]

Code Examples

```
>>> x = torch.tensor([1, 2, 3])
>>> torch.is_tensor(x)
True
```

Detailed Documentation

Documentation

Returns True if obj is a PyTorch tensor.

Note that this function is simply doing `isinstance(obj, Tensor)`. Using that `isinstance` check is better for type checking with `mypy`, and more explicit - so it's recommended to use that instead of `is_tensor`.

obj (object) – Object to test

Returns True if obj is a PyTorch tensor.

Note that this function is simply doing `isinstance(obj, Tensor)`. Using that `isinstance` check is better for type checking with `mypy`, and more explicit - so it's recommended to use that instead of `is_tensor`.

obj (object) – Object to test
