

torch.isnan#

<https://pytorch.org/docs/stable/generated/torch.isnan.html>

Description:

Returns a new tensor with boolean elements representing if each element of input is NaN or not. Complex values are considered NaN when either their real and/or imaginary part is NaN. input (Tensor) – the input tensor.

A boolean tensor that is True where input is NaN and False elsewhere

Function Signature

`torch.isnan(input) → Tensor#`

Parameters

Returns

Returns:

A boolean tensor that is True where input is NaN and False elsewhere

Code Examples

```
>>> torch.isnan(torch.tensor([1, float('nan'), 2]))
tensor([False,  True, False])
```

Detailed Documentation

Documentation

Returns a new tensor with boolean elements representing if each element of input is NaN or not. Complex values are considered NaN when either their real and/or imaginary part is NaN.

input (Tensor) – the input tensor.

A boolean tensor that is True where input is NaN and False elsewhere

Returns a new tensor with boolean elements representing if each element of input is NaN or not. Complex values are considered NaN when either their real and/or imaginary part is NaN.
