

torch.isreal#

<https://pytorch.org/docs/stable/generated/torch.isreal.html>

Description:

Returns a new tensor with boolean elements representing if each element of input is real-valued or not. All real-valued types are considered real. Complex values are considered real when their imaginary part is 0. input (Tensor) – the input tensor. A boolean tensor that is True where input is real and False elsewhere

Function Signature

`torch.isreal(input) → Tensor#`

Parameters

Returns

Returns:

A boolean tensor that is True where input is real and False elsewhere

Code Examples

```
>>> torch.isreal(torch.tensor([1, 1+1j, 2+0j]))
tensor([True, False, True])
```

Detailed Documentation

Documentation

Returns a new tensor with boolean elements representing if each element of input is real-valued or not. All real-valued types are considered real. Complex values are considered real when their imaginary part is 0.

input (Tensor) – the input tensor.

A boolean tensor that is True where input is real and False elsewhere

Returns a new tensor with boolean elements representing if each element of input is real-valued or not. All real-valued types are considered real. Complex values are considered real when their imaginary part is 0.

input (Tensor) – the input tensor.

A boolean tensor that is True where input is real and False elsewhere
