

# torch.logaddexp2#

<https://pytorch.org/docs/stable/generated/torch.logaddexp2.html#torch.logaddexp2>

## Description:

Logarithm of the sum of exponentiations of the inputs in base-2. Calculates pointwise  $\log_2(2^x + 2^y)$ . See `torch.logaddexp()` for more details. `input` (Tensor) – the input tensor. `other` (Tensor) – the second input tensor `out` (Tensor, optional) – the output tensor.

## Function Signature

---

```
torch.logaddexp2(input, other, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

## Parameters

---

### Keyword

out (Tensor, optional) – the output tensor.

# Detailed Documentation

---

## Documentation

Logarithm of the sum of exponentiations of the inputs in base-2.

Calculates  $\log_2(2^x + 2^y)$  pointwise. See `torch.logaddexp()` for more details.

`input` (Tensor) – the input tensor.

`other` (Tensor) – the second input tensor

`out` (Tensor, optional) – the output tensor.

Logarithm of the sum of exponentiations of the inputs in base-2.

Calculates  $\log_2(2^x + 2^y)$  pointwise. See `torch.logaddexp()` for more details.

`input` (Tensor) – the input tensor.

`input` (Tensor) – the input tensor.

`other` (Tensor) – the second input tensor

`other` (Tensor) – the second input tensor

`out` (Tensor, optional) – the output tensor.
