

# torch.manual\_seed#

[https://pytorch.org/docs/stable/generated/torch.manual\\_seed.html](https://pytorch.org/docs/stable/generated/torch.manual_seed.html)

## Description:

Sets the seed for generating random numbers on all devices. Returns a `torch.Generator` object. `seed (int)` – The desired seed. Value must be within the inclusive range `[-0x8000_0000_0000_0000, 0xffff_ffff_ffff_ffff]`. Otherwise, a `RuntimeError` is raised. Negative inputs are remapped to positive values with the formula `0xffff_ffff_ffff_ffff + seed`.

## Function Signature

---

```
torch.manual_seed(seed)[source]#
```

Parameters

Return type

## Returns:

Generator
