

torch.moveaxis#

<https://pytorch.org/docs/stable/generated/torch.moveaxis.html>

Description:

Alias for `torch.movedim()`. This function is equivalent to NumPy's `moveaxis` function.

Function Signature

```
torch.moveaxis(input, source, destination) → Tensor#
```

Code Examples

```
>>> t = torch.randn(3,2,1)
>>> t
tensor([[[[-0.3362],
          [-0.8437]],

        [[-0.9627],
          [ 0.1727]],

        [[ 0.5173],
          [-0.1398]]]])
>>> torch.moveaxis(t, 1, 0).shape
torch.Size([2, 3, 1])
>>> torch.moveaxis(t, 1, 0)
tensor([[[[-0.3362],
          [-0.9627],
          [ 0.5173]],

        [[-0.8437],
          [ 0.1727],
          [-0.1398]]]])
>>> torch.moveaxis(t, (1, 2), (0, 1)).shape
torch.Size([2, 1, 3])
>>> torch.moveaxis(t, (1, 2), (0, 1))
tensor([[[[-0.3362, -0.9627,  0.5173]],

        [[-0.8437,  0.1727, -0.1398]]]])
```

Detailed Documentation

Documentation

Alias for `torch.movedim()`.

This function is equivalent to NumPy's `moveaxis` function.

Alias for `torch.movedim()`.

This function is equivalent to NumPy's `moveaxis` function.
