

torch.mps.compile_shader#

https://pytorch.org/docs/stable/generated/torch.mps.compile_shader.html

Description:

Compiles compute shader from source and allows one to invoke kernels defined there from the comfort of Python runtime Example:

Function Signature

```
torch.mps.compile_shader(source)[source]#
```

Code Examples

```
>>> lib = torch.mps.compile_shader(
... "kernel void full(device float* out, constant float& val,
... uint idx [[thread_position_in_grid]]) { out[idx] = val; }"
... )
>>> x = torch.zeros(16, device="mps")
>>> lib.full(x, 3.14)
```

Detailed Documentation

Documentation

Compiles compute shader from source and allows one to invoke kernels defined there from the comfort of Python runtime Example:
