

torch.mul#

<https://pytorch.org/docs/stable/generated/torch.mul.html>

Description:

Multiplies input by other. Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs. input (Tensor) – the input tensor. other (Tensor or Number) – the tensor or number to multiply input by. out (Tensor, optional) – the output tensor.

Function Signature

```
torch.mul(input, other, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

Parameters

Keyword

out (Tensor, optional) – the output tensor.

Code Examples

```
>>> a = torch.randn(3)
>>> a
tensor([ 0.2015, -0.4255,  2.6087])
>>> torch.mul(a, 100)
tensor([ 20.1494, -42.5491, 260.8663])

>>> b = torch.randn(4, 1)
>>> b
tensor([[ 1.1207],
        [-0.3137],
        [ 0.0700],
        [ 0.8378]])
>>> c = torch.randn(1, 4)
>>> c
tensor([[ 0.5146,  0.1216, -0.5244,  2.2382]])
>>> torch.mul(b, c)
tensor([[ 0.5767,  0.1363, -0.5877,  2.5083],
        [-0.1614, -0.0382,  0.1645, -0.7021],
        [ 0.0360,  0.0085, -0.0367,  0.1567],
        [ 0.4312,  0.1019, -0.4394,  1.8753]])
```

Detailed Documentation

Documentation

Multiplies input by other.

Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs.

input (Tensor) – the input tensor.

other (Tensor or Number) – the tensor or number to multiply input by.

out (Tensor, optional) – the output tensor.

Multiplies input by other.

Supports broadcasting to a common shape, type promotion, and integer, float, and complex inputs.

input (Tensor) – the input tensor.

input (Tensor) – the input tensor.

other (Tensor or Number) – the tensor or number to multiply input by.

other (Tensor or Number) – the tensor or number to multiply input by.

out (Tensor, optional) – the output tensor.
