

torch.nextafter#

<https://pytorch.org/docs/stable/generated/torch.nextafter.html>

Description:

Return the next floating-point value after input towards other, elementwise. The shapes of input and other must be broadcastable.

input (Tensor) – the first input tensor
other (Tensor) – the second input tensor
out (Tensor, optional) – the output tensor.

Function Signature

```
torch.nextafter(input, other, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

Parameters

Keyword

out (Tensor, optional) – the output tensor.

Code Examples

```
>>> eps = torch.finfo(torch.float32).eps
>>> torch.nextafter(torch.tensor([1.0, 2.0]), torch.tensor([2.0,
1.0])) == torch.tensor([eps + 1, 2 - eps])
tensor([True, True])
```

Detailed Documentation

Documentation

Return the next floating-point value after input towards other, elementwise.

The shapes of input and other must be broadcastable.

input (Tensor) – the first input tensor

other (Tensor) – the second input tensor

out (Tensor, optional) – the output tensor.

Return the next floating-point value after input towards other, elementwise.

The shapes of input and other must be broadcastable.

input (Tensor) – the first input tensor

input (Tensor) – the first input tensor

other (Tensor) – the second input tensor

other (Tensor) – the second input tensor

out (Tensor, optional) – the output tensor.
