

torch.promote_types#

https://pytorch.org/docs/stable/generated/torch.promote_types.html

Description:

Returns the torch.dtype with the smallest size and scalar kind that is not smaller nor of lower kind than either type1 or type2. See type promotion documentation for more information on the type promotion logic. type1 (torch.dtype) – type2 (torch.dtype) –

Function Signature

```
torch.promote_types(type1, type2) → dtype#
```

Parameters

Code Examples

```
>>> torch.promote_types(torch.int32, torch.float32)
torch.float32
>>> torch.promote_types(torch.uint8, torch.long)
torch.long
```

Detailed Documentation

Documentation

Returns the torch.dtype with the smallest size and scalar kind that is not smaller nor of lower kind than either type1 or type2. See type promotion documentation for more information on the type promotion logic.

type1 (torch.dtype) –

type2 (torch.dtype) –

Returns the torch.dtype with the smallest size and scalar kind that is not smaller nor of lower kind than either type1 or type2. See type promotion documentation for more information on the type promotion logic.

type1 (torch.dtype) –

type1 (torch.dtype) –

type2 (torch.dtype) –

type2 (torch.dtype) –
