

torch.reciprocal#

<https://pytorch.org/docs/stable/generated/torch.reciprocal.html#torch.reciprocal>

Description:

Returns a new tensor with the reciprocal of the elements of input. Unlike NumPy's `reciprocal`, `torch.reciprocal` supports integral inputs. Integral inputs to `reciprocal` are automatically promoted to the default scalar type.

input (Tensor) – the input tensor. out (Tensor, optional) – the output tensor.

Function Signature

```
torch.reciprocal(input, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

Parameters

Keyword

out (Tensor, optional) – the output tensor.

Code Examples

```
>>> a = torch.randn(4)
>>> a
tensor([-0.4595, -2.1219, -1.4314,  0.7298])
>>> torch.reciprocal(a)
tensor([-2.1763, -0.4713, -0.6986,  1.3702])
```

Notes & Warnings

NOTE

Unlike NumPy's `reciprocal`, `torch.reciprocal` supports integral inputs. Integral inputs to `reciprocal` are automatically promoted to the default scalar type.

Detailed Documentation

Documentation

Returns a new tensor with the reciprocal of the elements of input

Unlike NumPy's `reciprocal`, `torch.reciprocal` supports integral inputs. Integral inputs to `reciprocal` are automatically promoted to the default scalar type.

`input` (Tensor) – the input tensor.

`out` (Tensor, optional) – the output tensor.

Returns a new tensor with the reciprocal of the elements of input

Unlike NumPy's `reciprocal`, `torch.reciprocal` supports integral inputs. Integral inputs to `reciprocal` are automatically promoted to the default scalar type.

`input` (Tensor) – the input tensor.

`out` (Tensor, optional) – the output tensor.
