

torch.resolve_conj#

https://pytorch.org/docs/stable/generated/torch.resolve_conj.html

Description:

Returns a new tensor with materialized conjugation if input's conjugate bit is set to True, else returns input. The output tensor will always have its conjugate bit set to False. input (Tensor) – the input tensor.

Function Signature

`torch.resolve_conj(input) → Tensor#`

Parameters

Code Examples

```
>>> x = torch.tensor([-1 + 1j, -2 + 2j, 3 - 3j])
>>> y = x.conj()
>>> y.is_conj()
True
>>> z = y.resolve_conj()
>>> z
tensor([-1 - 1j, -2 - 2j, 3 + 3j])
>>> z.is_conj()
False
```

Detailed Documentation

Documentation

Returns a new tensor with materialized conjugation if input's conjugate bit is set to True, else returns input. The output tensor will always have its conjugate bit set to False.

input (Tensor) – the input tensor.

Returns a new tensor with materialized conjugation if input's conjugate bit is set to True, else returns input. The output tensor will always have its conjugate bit set to False.
