

torch.resolve_neg#

https://pytorch.org/docs/stable/generated/torch.resolve_neg.html

Description:

Returns a new tensor with materialized negation if input's negative bit is set to True, else returns input. The output tensor will always have its negative bit set to False. input (Tensor) – the input tensor.

Function Signature

```
torch.resolve_neg(input) → Tensor#
```

Parameters

Code Examples

```
>>> x = torch.tensor([-1 + 1j, -2 + 2j, 3 - 3j])
>>> y = x.conj()
>>> z = y.imag
>>> z.is_neg()
True
>>> out = z.resolve_neg()
>>> out
tensor([-1., -2., 3.])
>>> out.is_neg()
False
```

Detailed Documentation

Documentation

Returns a new tensor with materialized negation if input's negative bit is set to True, else returns input. The output tensor will always have its negative bit set to False.

input (Tensor) – the input tensor.

Returns a new tensor with materialized negation if input's negative bit is set to True, else returns input. The output tensor will always have its negative bit set to False.
