

torch.result_type#

https://pytorch.org/docs/stable/generated/torch.result_type.html#torch.result_type

Description:

Returns the torch.dtype that would result from performing an arithmetic operation on the provided input tensors. See [type promotion documentation](#) for more information on the type promotion logic.

tensor1 (Tensor or Number) – an input tensor or number
tensor2 (Tensor or Number) – an input tensor or number

Function Signature

```
torch.result_type(tensor1, tensor2) → dtype#
```

Parameters

Code Examples

```
>>> torch.result_type(torch.tensor([1, 2], dtype=torch.int),  
1.0)  
torch.float32  
>>> torch.result_type(torch.tensor([1, 2], dtype=torch.uint8),  
torch.tensor(1))  
torch.uint8
```

Detailed Documentation

Documentation

Returns the `torch.dtype` that would result from performing an arithmetic operation on the provided input tensors. See type promotion documentation for more information on the type promotion logic.

`tensor1` (Tensor or Number) – an input tensor or number

`tensor2` (Tensor or Number) – an input tensor or number

Returns the `torch.dtype` that would result from performing an arithmetic operation on the provided input tensors. See type promotion documentation for more information on the type promotion logic.

`tensor1` (Tensor or Number) – an input tensor or number

`tensor1` (Tensor or Number) – an input tensor or number

`tensor2` (Tensor or Number) – an input tensor or number

`tensor2` (Tensor or Number) – an input tensor or number
