

torch.set_default_tensor_type#

https://pytorch.org/docs/stable/generated/torch.set_default_tensor_type.html

Description:

This function is deprecated as of PyTorch 2.1, please use `torch.set_default_dtype()` and `torch.set_default_device()` as alternatives. Sets the default `torch.Tensor` type to floating point tensor type `t`. This type will also be used as default floating point type for type inference in `torch.tensor()`. The default floating point tensor type is initially `torch.FloatTensor`. `t` (type or string) – the floating point tensor type or its name

Function Signature

```
torch.set_default_tensor_type(t, /)[source]#
```

Parameters

Code Examples

```
>>> torch.tensor([1.2, 3]).dtype      # initial default for
floating point is torch.float32
torch.float32
>>> torch.set_default_tensor_type(torch.DoubleTensor)
>>> torch.tensor([1.2, 3]).dtype      # a new floating point
tensor
torch.float64
```

Notes & Warnings

 **WARNING** This function is deprecated as of PyTorch 2.1, please use `torch.set_default_dtype()` and `torch.set_default_device()` as alternatives.

Detailed Documentation

Documentation

This function is deprecated as of PyTorch 2.1, please use `torch.set_default_dtype()` and `torch.set_default_device()` as alternatives.

Sets the default `torch.Tensor` type to floating point tensor type `t`. This type will also be used as default floating point type for type inference in `torch.tensor()`.

The default floating point tensor type is initially `torch.FloatTensor`.

`t` (type or string) – the floating point tensor type or its name
