

torch.set_deterministic_debug_mode#

https://pytorch.org/docs/stable/generated/torch.set_deterministic_debug_mode

Description:

Sets the debug mode for deterministic operations. This is an alternative interface for `torch.use_deterministic_algorithms()`. Refer to that function's documentation for details about affected operations. `debug_mode` (str or int) – If “default” or 0, don't error or warn on nondeterministic operations. If “warn” or 1, warn on nondeterministic operations. If “error” or 2, error on nondeterministic operations.

Function Signature

```
torch.set_deterministic_debug_mode(debug_mode)[source]#
```

Parameters

Notes & Warnings

NOTE

Note This is an alternative interface for `torch.use_deterministic_algorithms()`. Refer to that function's documentation for details about affected operations.

Detailed Documentation

Documentation

Sets the debug mode for deterministic operations.

This is an alternative interface for `torch.use_deterministic_algorithms()`. Refer to that function's documentation for details about affected operations.

`debug_mode` (str or int) – If “default” or 0, don't error or warn on nondeterministic operations. If “warn” or 1, warn on nondeterministic operations. If “error” or 2, error on nondeterministic operations.
