

torch.set_num_interop_threads#

https://pytorch.org/docs/stable/generated/torch.set_num_interop_threads.html

Description:

Sets the number of threads used for interop parallelism (e.g. in JIT interpreter) on CPU. Can only be called once and before any inter-op parallel work is started (e.g. JIT execution).

Function Signature

```
torch.set_num_interop_threads(int)#
```

Notes & Warnings

WARNING

Warning Can only be called once and before any inter-op parallel work is started (e.g. JIT execution).
