

torch.signbit#

<https://pytorch.org/docs/stable/generated/torch.signbit.html#torch.signbit>

Description:

Tests if each element of input has its sign bit set or not. input (Tensor) – the input tensor. out (Tensor, optional) – the output tensor.

Function Signature

```
torch.signbit(input, *, out=None) → Tensor#
```

Parameters

Keyword Arguments

Parameters

Keyword

out (Tensor, optional) – the output tensor.

Code Examples

```
>>> a = torch.tensor([0.7, -1.2, 0., 2.3])
>>> torch.signbit(a)
tensor([ False,  True,  False,  False])
>>> a = torch.tensor([-0.0, 0.0])
>>> torch.signbit(a)
tensor([ True,  False])
```

Notes & Warnings

NOTE

Note signbit handles signed zeros, so negative zero (-0) returns True.

Detailed Documentation

Documentation

Tests if each element of input has its sign bit set or not.

input (Tensor) – the input tensor.

out (Tensor, optional) – the output tensor.

signbit handles signed zeros, so negative zero (-0) returns True.

Tests if each element of input has its sign bit set or not.

input (Tensor) – the input tensor.

out (Tensor, optional) – the output tensor.

signbit handles signed zeros, so negative zero (-0) returns True.
