

torch.sparse.addmm#

<https://pytorch.org/docs/stable/generated/torch.sparse.addmm.html>

Description:

This function does exact same thing as `torch.addmm()` in the forward, except that it supports backward for sparse COO matrix `mat1`. When `mat1` is a COO tensor it must have `sparse_dim = 2`. When inputs are COO tensors, this function also supports backward for both inputs. Supports both CSR and COO storage formats. This function doesn't support computing derivatives with respect to CSR matrices. `mat` (Tensor) – a dense matrix to be added

Function Signature

```
torch.sparse.addmm(mat, mat1, mat2, *, beta=1., alpha=1.) → Tensor#
```

Parameters

Notes & Warnings

NOTE

Note This function doesn't support computing derivatives with respect to CSR matrices.

Detailed Documentation

Documentation

This function does exact same thing as `torch.addmm()` in the forward, except that it supports backward for sparse COO matrix `mat1`. When `mat1` is a COO tensor it must have `sparse_dim = 2`. When inputs are COO tensors, this function also supports backward for both inputs.

Supports both CSR and COO storage formats.

This function doesn't support computing derivatives with respect to CSR matrices.

`mat` (Tensor) – a dense matrix to be added

`mat1` (Tensor) – a sparse matrix to be multiplied

`mat2` (Tensor) – a dense matrix to be multiplied

`beta` (Number, optional) – multiplier for `mat` (β)

`alpha` (Number, optional) – multiplier for `mat1 @ mat2` (α)
