

torch.sym_max#

https://pytorch.org/docs/stable/generated/torch.sym_max.html#torch.sym_max

Description:

SymInt-aware utility for max which avoids branching on $a < b$. Unlike `builtins.max()`, this only works for int/float, and it always promotes to float if any argument is float (unlike `builtins.max`, which will faithfully preserve the type of the input argument).

Function Signature

```
torch.sym_max(a, b)[source]#
```

Detailed Documentation

Documentation
