

torch.t#

<https://pytorch.org/docs/stable/generated/torch.t.html>

Description:

Expects input to be $\leq$ 2-D tensor and transposes dimensions 0 and 1. 0-D and 1-D tensors are returned as is. When input is a 2-D tensor this is equivalent to `transpose(input, 0, 1)`. input (Tensor) – the input tensor. See also `torch.transpose()`.

Function Signature

`torch.t(input) → Tensor#`

Parameters

Code Examples

```
>>> x = torch.randn(())
>>> x
tensor(0.1995)
>>> torch.t(x)
tensor(0.1995)
>>> x = torch.randn(3)
>>> x
tensor([ 2.4320, -0.4608,  0.7702])
>>> torch.t(x)
tensor([ 2.4320, -0.4608,  0.7702])
>>> x = torch.randn(2, 3)
>>> x
tensor([[ 0.4875,  0.9158, -0.5872],
        [ 0.3938, -0.6929,  0.6932]])
>>> torch.t(x)
tensor([[ 0.4875,  0.3938],
        [ 0.9158, -0.6929],
        [-0.5872,  0.6932]])
```

Detailed Documentation

Documentation

Expects input to be $\leq$ 2-D tensor and transposes dimensions 0 and 1.

0-D and 1-D tensors are returned as is. When input is a 2-D tensor this is equivalent to `transpose(input, 0, 1)`.

`input (Tensor)` – the input tensor.

See also `torch.transpose()`.

Expects input to be $\leq$ 2-D tensor and transposes dimensions 0 and 1.

0-D and 1-D tensors are returned as is. When input is a 2-D tensor this is equivalent to `transpose(input, 0, 1)`.

`input (Tensor)` – the input tensor.

See also `torch.transpose()`.
