

torch.take#

<https://pytorch.org/docs/stable/generated/torch.take.html>

Description:

Returns a new tensor with the elements of input at the given indices. The input tensor is treated as if it were viewed as a 1-D tensor. The result takes the same shape as the indices. input (Tensor) – the input tensor. index (LongTensor) – the indices into tensor

Function Signature

```
torch.take(input, index) → Tensor#
```

Parameters

Code Examples

```
>>> src = torch.tensor([[4, 3, 5],  
...                      [6, 7, 8]])  
>>> torch.take(src, torch.tensor([0, 2, 5]))  
tensor([ 4,  5,  8])
```

Detailed Documentation

Documentation

Returns a new tensor with the elements of input at the given indices. The input tensor is treated as if it were viewed as a 1-D tensor. The result takes the same shape as the indices.

input (Tensor) – the input tensor.

index (LongTensor) – the indices into tensor

Returns a new tensor with the elements of input at the given indices. The input tensor is treated as if it were viewed as a 1-D tensor. The result takes the same shape as the indices.

input (Tensor) – the input tensor.

input (Tensor) – the input tensor.

index (LongTensor) – the indices into tensor

index (LongTensor) – the indices into tensor
